

Building A Banana Car

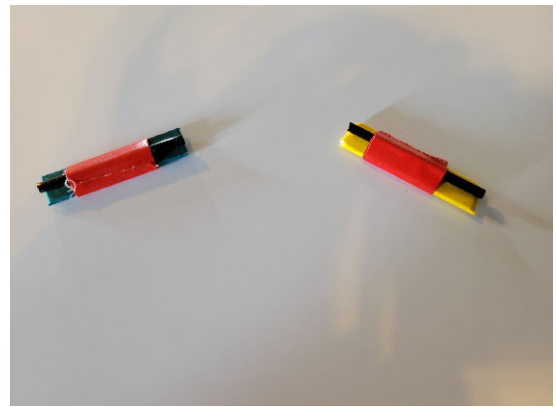

Step 1

Cut stir straws to be 1.75 inches and optional craft stick slightly shorter. Use two of each per car.

Step 2

Using duct tape, attach the Axle Housings to the supports, ensuring that the housing extends beyond the supports on both sides

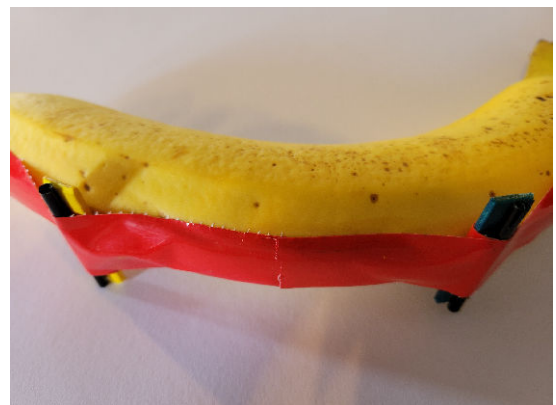

Step 3a

Depending on the curvature of the banana, attach the Axle Housings (supports optional) to the Banana about 4 to 5 inches apart

Step 3b

Use enough tape to ensure that the Axle Housings will stay attached to the bottom of the banana

Step 4

Insert Axels into Wheels, then into the Axel Housings. Removing and reinserting the Axels will result in a weakened Axel Housing which may cause the Wheels to fall off of the Banana during the race. If Axel Housing does not grip the Axel, replace by following steps 1 through 3

Step 5

Remove the "Dole" sticker (or not) and decorate your Banana for the derby! Bananas can be decorated with stickers, colorful tape, pompoms, markers, pipe cleaners or pretty much anything you can think of that won't get in the way of making your Banana Derby the fastest one on the track!
